

Claims

What is claimed is:

1. The lamination apparatus to form lamination layers of laminate film pasted on the surfaces of printed matter as posters, advertising fliers, computer output media or so, containing the shaft to support the core roll with films wound around, wherein said shaft having a groove on the cylindrical surface along the axial direction where a flexible tube of soft vinyl or so is set with both ends fixed by fittings.

2. The lamination apparatus to form lamination layers of laminate film pasted on the surfaces of printed matter as posters, advertising fliers, computer output media or so, containing the shaft to support the core roll with films wound around, wherein said shaft having a groove on the cylindrical surface along the axial direction where a flexible tube of soft vinyl or so is set with a bar inserted in and both ends of the bar fixed by fittings.
